Introduction

This project is an implementation of MSGSP algorithm for the class of Data Mining and Text Mining, CS-583.

Running the project:

- 1) To run the project please open the `src/Algorithm/Main.java` file and open the main method. put the file path for the parameter file, inputdata file and the output file as per your machine in the main function. A folder containing these 3 files is located under the src tab, you may use it.
- 2) make sure the class paths are set or use eclipse IDE
- 3) Run the `Main.java` file.
- 4)The output shall be available in the output file whose path had been earlier mentioned in the main method.
